No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                    1. /SIDS2/gcgdata/geneseq/geneseqn-embl/NA1980.DAT:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                420
                                                                                                                                                                                                                                  This is the nucleotide sequence of cDNA clone DNA44176 (ATCC 209532) coding for human PRO347 (UNQ306) (see AAV06482). The clone was isolated from a foetal kidney library. Amplification of DNA44176 occurs in various tumours, suggesting an association with tunmour formation or growth. Antagonists (e.g. antibodies) directed against PRO347 may have use in cancer therapy. The invention identifies 14 genes (see AAX87254-67) that are amplified in the genome of tumour overexpression of the gene product and to contribute to tumorigenesis. The encoded proteins (see AAX06477-90) may be useful targets for the diagnosis and/or treatment (including prevention) of certain cancers, and may act as predictors of the prognosis of

The Specification describes novel polypeptides designated PRO201, PRO292, PRO1207, PRO1205, PRO1404, PRO347, PRO347, PRO1505, PRO16017, PRO1512, PRO1609, PRO6853 and PRO6862. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human nucleic acids encoding secreted and transmembrane polypeptides which are designated as PRO polypeptides are described. The membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGAAACAAGCCGGGTGGCTGAGCCTGTGCACGGAGCACCTGACGGGCCCCAACAGAC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proteins may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. For example, they may be used in gene therapy or in vaccines. Typical of diseases which are potentially treatable are cancers (including leukemia), autoimmune diseases, allergies, inflammation, pyraft rejection, hyperproliferation, cardiovascular diseases (particularly critical limb ischemia and coronary disease) and any involving abnormal anglogenesis, neurodegeneration and/or

This cDNA encodes a human T139 polypeptide. The T139 polypeptide can be expressed by standard recombinant methodology. The T139 cDNA insert is deposited with ATCC under accession number 98604. The T139 polypeptides and polynucleotides can be administered therapeutically or prophylactically to treat/prevent disorders associated with aberrant T139 expression or activity. especially proliferative or differentiative disorders, e.g. of the immune system. They can be used to modulate spermatogenesis, e.g. as a contraceptive to decrease spermatogenesis or to treat disorders related to defects in sperm-egg fusion. They may also be useful to treat testicular disorders e.g. testicular cancer. The polypeptides may be used to identify selectively binding compounds which may be useful for detecting the polypeptides in samples; and identifying compounds modulating polypeptide activity. The polynucleotides are useful for producing probes or primers that selecting the polynucleotides in a sample, gene mapping; identifying cells or tissues expressing aberrant tisk for or having a disorder associated with T139 expression or activity and to monitor therapeutic interventions; and for producing antisense sequences for therapeutic administration to modulate to provent T139 expression.

Novel TANGO polypeptides and nucleic acid molecules useful as modulating agents in regulating cellular processes and for diagnosing and treating heart, liver, lung, kidney, inflammatory and cellular proliferative disorders

Claim 26; Fig 1; 138pp; English.

The invention relates to nucleic acids encoding a variety of proteins burman T139 (TANGO-125), T110 (TANGO-110), murine T175 (TANGO-125), Muman T175 or murine WDNM-2, having diagnostic, preventive, to inhibit a proteinase activity, to modulate call-cell interactions, neamatopoiesis and the ability to modulate call-cell interactions, neamatopoiesis and the alinity to modulate call-cell interactions, neamatopoiesis and the annual to modulate call-cell interactions of the invention are useful for diagnosing and treating and treating and cartivity. The callular processes e.g. cell proliferation and/or cell differentiation. TANGO-139 is useful for treating kidney defects such as kidney fallure, carating cancer, are useful for treating neonet, TANGO-110 (TANGO-125) is useful for treating hound healing and for treating cancer, TANGO-110 (TANGO-125) is useful for treating hound healing and for treating cancer, TANGO-110 (TANGO-125) is useful for treating and for treating cancer, TANGO-110 (TANGO-125) is useful for treating modulating and for treating cancer, TANGO-110 (TANGO-125) is useful for treating modulating and for treating cancer, are useful to treat pancreatitis, creating and for treating modulations and tumours, and injury or trauma ischaemic heart disease, and tumours, and injury or traumal kidney) disorders, such as glomerular disorders, such as glomerular disorders, model and contracting proliferative disorders, such as glomerular disorders, acut and disorders, hyperplasia of the endometrium. TANGO-110 is useful for treat contracting proliferative disorders, inflammatory disorders, TANGO-175, or treating proliferative disorders, inflammatory disorders, religious erythematosus, inflammatory disorders, viral (Mondel apoptotic disorders, religioned apoptotic disorders, religioned and insorders, religioned in gene therapy. The present sequence is human T1139 cDNA.

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nuclectide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length
                                                                                                                                                                                                                                                human cDNA of the invention.
Note: The sequence data for this patent did not form part of the printed
specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

```

The present sequence is human protein with hydrophobic domain encoding CDNA clone HP10760. The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides into a host cell and culturing the cell to express the protein. The polynucleotides and its complementary sequences may also be used as DNA probes in diagnostic assays and also used in gene therapy. The polypeptides may also be used as antigens in the production of antibodies and in assays to identify modulators of polypeptide expression and activity. The polypeptides and nucleic acids may be used as nutritional supplements, to modulate cytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving currentiating a polypeptide in tissue, as molecular weight markers and as fundating of sites expressing (II). (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in capponsible for genetic disorders or other traits to assess biodiversity manno acid sequences. AAS64197-AAS94564 represent novel human cold diagnostic coding sequences of the invention.

Condensity of sequences of the invention.

Condensity of sequences of the invention.

Condensity of sequences of the invention of mutantions and the printed copies expensed to the printed in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  122 CATGCTGCATCCAGAGACCTCCCCTGGCGGGGGGCATCTCCTGGCTGTGCTCCTGGCCCT 181

This represents the coding sequence of the numen 1129 polypeptide can be expressed by standard recombinant methodology.

The T139 polypeptide can be expressed by standard recombinant methodology.

The T139 colNA insert is deposited with ATCC under accession number

therefore the permitted of the sequence of the information of differentiative disorders, e.g. of the immune system. They can be used to differentiative disorders, e.g. of the immune system. They can be used to differentiative disorders, e.g. of the immune system. They can be used to decrease spermatogenesis, e.g. as a contraceptive to decrease spermatogenesis or to treat disorders related to defects in sperm-egg spermatogenesis or to treat disorders related to defects in sperm-egg tusion. They may also be useful to treat testicular disorders e.g. testicular cancer. The polypeptides may be used to identify selectively compounds which may be useful for detecting the polypeptides in samples; and identifying compounds modulating polypeptide activity. The polypericular processing the polymucleotides which may be useful for electing the polymucleotides in a sample, gene mapping; identifying cetting the polymucleotides in a sample, gene mapping; identifying cetting the polymucleotides in a sample, gene mutated or deleted to identify subjects at risk for or having a disorder associated with T139 expression or activity and to monitor therapeutic interventions; and for producing antisense sequences for therapeutic administration to modulate/prevent T139 expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360

The invention relates to isolated polynucleotide (I) and proposed (II) sequences. (I) is useful as hybridisation probes, colypeptide (II) sequences. (I) is useful as hybridisation probes, comparese chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The colynucleotides are also used in diagnostics as expressed sequence tags (I) if identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical color states expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in capporation, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cold sequences. AsSet197-AsSet564 represent novel human DNA and sequences as based or this patent did not appear in the printed security in expension or intentity from MIPO at the expense or the invention of colding sequences or the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (FGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and its binding partners are useful in medical inaging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in casponal partners are useful for treating disorders involving aberrant formapping, identification of mutations capanish for genetic disorders or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   303
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              307

The present invention describes an isolated polypeptide comprising an immunogenic portion of an ovarian carcinoma protein (or its variants). Ovarian carcinoma proteins, and polynucleotides encoding them, have cytostatic activity and can be used in gene therapy and vaccines. Ovarian carcinoma polypeptides, nucleic acids, antibodies and vaccines are useful for the prevention, diagnosis and treatment of cancer, preferably ovarian cancer. AAA66691 to AAA70077 and AAB12552 to AAB12557 represent human ovarian carcinoma polynucleotides and proteins used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein and the nucleic prevention and treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                         portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents DNA related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ACAG-AGCCAGGATGAAATGTCAGAGGAAGGCGGGGTGCTGGCCCCAGATCAAGAGCCAG 1142

Submitted (09-JUL 2002) 1, D-85764 Newherberg, GERMANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz=heidelberg.de;
Sequenced by MediGenomix (Martinsried/Germany) within the cDNA
sequencing consortium of the German Genome Project. This clone
(DKFZD686E1934) is available at the RZPD in Berlin. Please contact
the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
information about the clone and the sequencing project is available

* NOTE: This is a 'working draft' sequence. It currently

* consists of 60 contigs. The true order of the places

* is not known and their order in this sequence record is

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         * NOTE: This record contains 79 individual

* Sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                              Contact: sequence_submissions@genome.wi.mit.edu
